

Ferrous Gluconate

FERROUS GLUCONATE tablets are formulated for use in animals requiring iron supplementation in the diet. They may be used in most species, and are particularly useful in animals fed an iron deficient all-fish diet to provide additional iron to that in **AQUAVITS**.

Iron is essential in the diet to maintain healthy blood cells and prevent anaemia. Care in the use of iron supplements is needed to avoid the direct toxicity or an imbalance of nutrients.

Our recommendations for the use of **FERROUS GLUCONATE** 300mg tablets are as follows:

Dolphins

1 tablet per day, in conjunction with **AQUAVITS**

Pinnipeds

1 tablet per day for medium to large animals, in conjunction with **AQUAVITS**

The additional iron should be given with food later in the day.

FERROUS GLUCONATE 300mg tablets are manufactured to pharmaceutical standards on behalf of the International Zoo Veterinary Group and are available from the address below in bottles of 1000.
